Common pitfalls

- **Anchored to the whole string.** This pattern uses ^ and \$, so it requires the entire input to match. To find it inside a longer text, drop the anchors and use the global (g) flag.
- **Lowercase only.** Ranges like [a-z] won't match uppercase. Add A-Z (or the i flag) if uppercase input should be accepted.
- **Validate beyond format.** Matching the format doesn't guarantee the value is real. Confirm the discord username (new) against a source of truth (database, API, or checksum) where it matters.
