Common pitfalls

- **Anchored to the whole string.** This pattern uses ^ and \$, so it requires the entire input to match. To find it inside a longer text, drop the anchors and use the global (g) flag.
- **Uppercase only.** Ranges like [A-Z] won't match lowercase. Add a-z (or the i flag) if lowercase input should be accepted.
- **Validate beyond format.** Matching the format doesn't guarantee the value is real. Confirm the puc certificate number against a source of truth (database, API, or checksum) where it matters.
