Commercial vehicle (yellow plate)

Commercial vehicles have yellow plates — same regex as regular.

```
^[A-Z]{2}[\s\-]?\d{1,2}[\s\-]?[A-Z]{1,3}[\s\-]?\d{4}$
```

Token-by-token breakdown

Common pitfalls

- **Anchored to the whole string.** This pattern uses ^ and $, so it requires the entire input to match. To find it inside a longer text, drop the anchors and use the global (g) flag.
- **Uppercase only.** Ranges like [A-Z] won't match lowercase. Add a-z (or the i flag) if lowercase input should be accepted.
- **Escape it correctly per language.** In Java and JavaScript strings each backslash must be doubled (\\d); in Python, Go, and C# use raw/verbatim strings so the backslashes survive.
- **Validate beyond format.** Matching the format doesn't guarantee the value is real. Confirm the commercial vehicle (yellow plate) against a source of truth (database, API, or checksum) where it matters.
